

# Network Layer

Routing Table				
dest_id				
dest_seq_num				
next_hop				
num_hops				
expiration_time				

every time a table entry is used  
-> reset expiration time  
-> e.g. 20 days (more proactive)  
num\_hops = 255 -> unreachable

TX power		
next_hop		
tx_power_lv		
expiration_time		

expiration\_time always counts down  
-> if it expires  
-> reset tx power to minimum  
-> e.g. 2 hours
